n	n
m	m

---

RSBJsonService      *Generic Function to Handle R Requests from RSB JSON Applications...*

---

### Description

Generic Function to Handle R Requests from RSB JSON Applications

### Usage

RSBJsonService(jsonString)

**Arguments**

`jsonString` character vector of length one containing the JSON string

**Details**

The function extracts relevant information from the JSON string to dispatch to the appropriate R wrapper for that particular application

**Value**

character vector of length one representing the output JSON string

**Author(s)**

Tobias Verbeke
